

Amendments to the Specification

Please amend the paragraph bridging pages 8 and 9, as follows:

In the polymerisable host, $Q \left[\text{---} \text{L} \text{---} \right]_m \text{X} \text{I}_n$, the charge-transporting fragment, Q, preferably contains at least one carbazole or arylamine unit. More preferably, Q contains at least two carbazole units. Q can be based on known hole-transporting arylamine materials such as those with the formula

where Ar is an optionally substituted aromatic group, such as phenyl, or

and Ar₁, Ar₂, Ar₃ and Ar₄ are optionally substituted aromatic or heteroaromatic groups. Ar is preferably biphenyl. At least two of Ar₁, Ar₂, Ar₃ and Ar₄ are bonded to a cross-linkable group, X. Ar₁ and Ar₂, and/or Ar₃ and Ar₄ are optionally linked to form a N containing ring, for example so that the N forms part of a carbazole unit eg.
